Consent Form for Participation in Research

IRB No: HS10-360 page 1
Approved: June 24, 2010
Expires: June 23, 2011
Modified: Version 1/2009

This survey is part of a research study conducted by Alexander L. Davis at Carnegie Mellon University. The purpose of the research is to learn about peoples' scientific intuitions.

Procedures

You will be given a questionnaire which concerns your scientific intuitions. We would like to ask you a number of questions about experiments that have recently been conducted or will be conducted in the near future.

Participant Requirements

Participation in this study is limited to individuals age 18 and older.

Risks

The risks and discomfort associated with participation in this study are no greater than those ordinarily encountered in daily life or during other online activities.

Benefits

There may be no personal benefit from your participation in the study but the knowledge received may be of value to humanity.

Compensation & Costs

You will be paid \$1.00 for your participation. There will be no cost to you if you participate in this study.

Confidentiality

By participating in this research, you understand and agree that Carnegie Mellon may be required to disclose your consent form, data and other personally identifiable information as required by law, regulation, subpoena or court order. Otherwise, your confidentiality will be maintained in the following manner:

Your data and consent form will be kept separate. Your consent form will be stored in a locked

location on Carnegie Mellon property and will not be disclosed to third parties. By participating, you understand and agree that the data and information gathered during this study may be used by Carnegie Mellon and published and/or disclosed by Carnegie Mellon to others outside of Carnegie Mellon. However, your name, address, contact information and other direct personal identifiers in your consent form will not be mentioned in any such publication or dissemination of the research data and/or results by Carnegie Mellon.

Right to Ask Questions & Contact Information

If you have any questions about this study, you should feel free to ask them by contacting the Principal Investigator now at Alexander L. Davis, Department of Social and Decision Sciences, Pittsburgh, PA, 15213, Porter Hall 208A, 412-216-2040, ald1@andrew.cmu.edu. If you have questions later, desire additional information, or wish to withdraw your participation please contact the Principle Investigator by mail, phone or e-mail in accordance with the contact information listed above.

If you have questions pertaining to your rights as a research participant; or to report objections to this study, you should contact the Research Regulatory Compliance Office at Carnegie Mellon University.
Email: irb-review@andrew.cmu.edu . Phone: 412-268-1901 or 412-268-5460.

The Carnegie Mellon University Institutional Review Board (IRB) has approved the use of human participants for this study.

Voluntary Participation

Your participation in this research is voluntary. You may discontinue participation at any time during the research activity.

I have read and understand the information above.

- Yes
- No

I am age 18 or older.

- Yes
- No

I want to participate in this research and continue with the survey.

- Yes
- No

What is your age?

Are you male or female?

- Male
- Female

What is your current occupation?

How familiar are you with working on a computer?

Not at all familiar Moderately familiar Very familiar

How often have you participated in conference calls?

- Never
- Less than Once a Month
- Once a Month
- 2-3 Times a Month
- Once a Week
- 2-3 Times a Week

- Daily

The first task requires you to read the email below and answer two questions.

Subject: Tomorrow's meeting

From: "Ginger Holmes" <gholmes@bru.edu>

Date: Wed, May 13, 2009 8:31 am

To: "Pat Jones" <patjones@bru.edu>

Priority: Normal

Pat,

Since Christi is out of town, the staff council meeting will be held via telephone tomorrow. We will discuss the proposed reorganization of the Human Resources department to better serve the faculty and staff at BRU. During this conference call, we will also discuss the decisions reached at the 11am meeting of the University Benefits department. It is critical that all attendees of the University Benefits department, especially those who attended the morning meeting, also attend this conference call, to ensure that necessary recommendations of this committee are incorporated into our procedural changes. Details for the conference call are listed below. Also, please confirm your participation via email to me.

Date: Thursday, May 14

Time: 2:00 PM (EST)

Number: 1-800-555-1200

8533123 (passcode)

Thanks,

Ginger Holmes

Administrative Coordinator

Recruiting and Staffing

- University Benefits
- Orientation

Scientific Intuitions

The following questionnaire concerns your scientific intuitions. We would like to ask you a number of questions about possible results of several experiments in different areas that have recently been conducted or will be conducted in the near future. We thank you for your cooperation.

Study 1

Virgin rat. Several researchers intend to perform the following experiment: They will inject blood from a mother rat into a virgin rat immediately after the mother rat has given birth. After the injection, the virgin rat will be placed in a cage with the newly born baby rats, after removal of the actual mother.

The possible outcomes are (a) the virgin rat exhibited maternal behavior or (b) the virgin rat failed to exhibit maternal behavior.

1a. What is the probability that the virgin rat will exhibit maternal behavior?

0 10 20 30 40 50 60 70 80 90 100

(Must be a number between 0-100)

Please explain why you think this might happen:

1b. What is the probability that the virgin rat will not exhibit maternal behavior?

0 10 20 30 40 50 60 70 80 90 100

(Must be a number between 0-100)

Please explain why you think this might happen:

2. If the virgin rat exhibits maternal behavior, what is the probability that in a replication of this experiment with 10 additional virgin rats

(Note: These three probabilities should total 100%.)

- All will exhibit maternal behavior?

- Some will exhibit maternal behavior?

- None will exhibit maternal behavior?

- Total

3. If the virgin rat fails to exhibit maternal behavior, what is the probability that in a replication of this experiment with 10 additional virgin rats.

(Note: These three probabilities should total 100%.)

- All will fail to exhibit maternal behavior?

- Some will fail to exhibit maternal behavior?

- None will fail to exhibit maternal behavior?

- Total

Study 2

Hurricane seeding. A team of government meteorologists recently seeded a tropical storm, which had reached hurricane status, with large quantities of silver-iodide crystals (the same type of crystals that are used to seed clouds in attempts to produce rain).

The possible outcomes were (a) the hurricane increased in intensity or (b) the hurricane decreased in intensity.

1a. What is the probability that the hurricane will increase in intensity?

0 10 20 30 40 50 60 70 80 90 100

**(Must
be a
number
between
0-100)**

Please explain why you think this might happen:

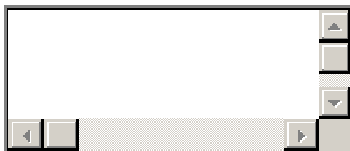

1b. What is the probability that the hurricane will decrease in intensity?

0 10 20 30 40 50 60 70 80 90 100

**(Must
be a
number
between
0-100)**

Please explain why you think this might happen:

2. If the hurricane increases in intensity, what is the probability that in a replication of this experiment with 10 additional hurricanes.

(Note: These three probabilities should total 100%.)

- All will increase in intensity?

- Some will increase in intensity?

- None will increase in intensity?

- Total

3. If the hurricane decreases in intensity, what is the probability that in a replication of this experiment with 10 additional hurricanes.

(Note: These three probabilities should total 100%.)

- All will decrease in intensity?

- Some will decrease in intensity?

- None will decrease in intensity?

- Total

Study 3

Gosling imprinting. A goose egg was placed in a soundproof, heated box from time of laying to time of cracking. Approximately 2 days before it cracked, the experimenter began intermittently to play sounds of ducks quacking into the box. On the day after birth, the gosling was placed on a smooth floor equidistant from a duck and a goose, each of which was in a wire cage. The gosling was observed for 2 minutes.

The possible outcomes were (a) the gosling approached the caged duck or (b) the gosling approached the caged goose.

1a. What is the probability that the gosling will approach the caged duck?

0 10 20 30 40 50 60 70 80 90 100

(Must be a number between 0-100)

Please explain why you think this might happen:

1b. What is the probability that the gosling will approach the caged goose?

0 10 20 30 40 50 60 70 80 90 100

(Must be a number between 0-100)

Please explain why you think this might happen:

2. If the gosling approaches the caged duck, what is the probability that in a replication of this experiment with 10 additional goslings.

(Note: These three probabilities should total 100%.)

- All will approach the caged duck?

- Some will approach the caged duck?

- None will approach the caged duck?

- Total

3. If the gosling approaches the caged goose, what is the probability that in a replication of this experiment with 10 additional goslings.

(Note: These three probabilities should total 100%.)

- All will approach the caged goose?

- Some will approach the caged goose?

- None will approach the caged goose?

- Total

Study 4

The Y test. In the pretest of an experiment that she intends to run in the future, an experimenter placed a 4-year-old child in front of an easel with a large Y on it, with a dot in the lower left-hand third of the letter. The child was then taken around to the back of the easel where he saw another Y. He was asked to draw a dot in the “same position” on that Y as the one he had just seen.

The possible outcomes were (a) the child placed a dot in Area A (the lower left-hand third), (b) the child placed a dot in Area B (the upper third), or (c) the child placed a dot in Area C (the lower-right hand third).

1a. What is the probability that the child will place a dot in Area A?

0 10 20 30 40 50 60 70 80 90 100

(Must
be a
number
between
0-100)

Please explain why you think this might happen:

1b. What is the probability that the child will place a dot in Area B?

0 10 20 30 40 50 60 70 80 90 100

(Must
be a
number
between
0-100)

Please explain why you think this might happen:

2. If the child places a dot in Area A, what is the probability that in a replication of this experiment with 10 additional children.

(Note: These three probabilities should total 100%.)

- All will place a dot in area A?

- Some will place a dot in area A?

- None will place a dot in area A?

- Total

3. If the child places a dot in Area B, what is the probability that in a replication of this experiment with 10 additional children.

(Note: These three probabilities should total 100%.)

- All will place a dot in Area B?

- Some will place a dot in Area B?

- None will place a dot in Area B?

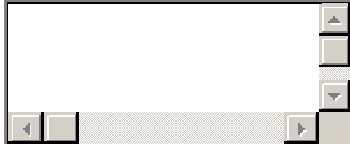

- Total

What is your age?

Are you male or female?

- Male
- Female

If you have any questions, comments, or concerns, please write them in the text box below. Your feedback is very helpful for us. Thank you.
